

PDP Series

Positive displacement
dosing pump

Sandwich hydraulic diaphragm type
with an internal relief-refilling valve

SDI

DOSEURO®

The right dosing choice

PDP Series

SUPPORTING ELEMENTS OF OUR PRODUCTS

Versatility

Different diaphragm sizes are available to suit different applications. Starting from 1,5 l/h to 4.000 l/h

Reliability

The use of quality materials along with a high degree of accuracy and repeatability assures maximum reliability for the sandwich diaphragm PDP series .

Quality

The best performance for each application is achieved through optimal selection of pump materials and diaphragm design .

Sandwich Hydraulic Diaphragm Dosing Pump

Type SD I

FEATURES

SDI Sandwich Hydraulic Diaphragm pumps are manufactured according API 675.

SDI pumps are suitable for use when:

- the liquid to dose contains small amounts of suspended solids
- the dosed liquid is a toxic solution
- liquid leaking are not accepted.

Is included on the pump an internal safety valve to protect the diaphragm against over pressure. The peculiarity of this pump is the special sandwich diaphragm and the reliability of the rupture diaphragm detention system . Accuracy is better than 1% from 10 to 100% of the stroke adjustment

PUMPING HEADS

Pump heads are manufactured in standard materials: S.S.316 and PVC. A wide range of other materials such as HASTELLOY, ALLOY, PTFE, PVDF and PP are also available .

Maximum temperature of fluids pumped:

- 60 °C with S.S. 316 pump head
- 40 °C with PVC pump head

Jacketed pump heads for either cooling and heating are available.

DIAPHRAGM

PTFE

DIAPHRAGM RUPTURE DETECTOR

- Pressure gauge
- Pressure switches
- Ex-proof Pressure switches

SUCTION AND DISCHARGE CONNECTIONS

Standard : BSP male

Upon request: Flanged, UNI , ANSI or NPT.

All pumps use ball check valves as standard: single or double balls in each valve, determined by piston diameter or construction materials.

STROKE ADJUSTMENT

Flow rate adjustment is possible while the pump is running or stopped. The movement of the diaphragm is based on a precise reciprocating gearbox which provides an exact volumetric displacement. Stroke adjustment can be carried out by the following:

- Manual: by a linear micrometer stroke knob.
- Electrical: via servo motor with 4-20 mA input signal or interfaced with PROFIBUS or other BUS.
- Pneumatic: by a pneumatic servo controller with signal from 3 to 15 PSI air input.

MULTIPLE HEADED PUMPS

Multiplex drive units with different performance can be coupled between them, independently from the size and stroke number.

Flow rate adjustment is possible while the pump is running or stopped.

"SDI" SERIES SANDWICH HYDRAULIC DIAPHRAGM PUMPS ARE AVAILABLE IN DIFFERENT MODELS:

SDI 250 : Stroke length 25 mm

SDI 350 : Stroke length 35 mm

The above models have different diaphragm sizes for varied capacities and pressures.

(*1) Piston's strokes number during 1 minute with 4 poles installed motor

I = Reducer ratio 1 : 38 = 36 strokes at 50 Hz / 43 strokes at 60 Hz

F = Reducer ratio 1 : 24 = 58 strokes at 50 Hz / 70 strokes at 60 Hz

C = Reducer ratio 1 : 14 = 100 strokes at 50 Hz / 120 strokes at 60 Hz

B = Reducer ratio 1 : 12 = 116 strokes at 50 Hz / 120 strokes at 60 Hz (not suitable)

(*2) The indicated capacity value is subject to changes due to the working pressure, the dosed liquid, the viscosity and the installation asset.

(*3) For capacity value at 60 Hz the max pressure indicate MUST BE DECREASE OF 20%

(4) The pumps can be supplied with accessories if requested

(*1) Piston's strokes number during 1 minute with 4 poles installed motor

I = Reducer ratio 1 : 38 = 36 strokes at 50 Hz / 43 strokes at 60 Hz

F = Reducer ratio 1 : 24 = 58 strokes at 50 Hz / 70 strokes at 60 Hz

C = Reducer ratio 1 : 14 = 100 strokes at 50 Hz / 120 strokes at 60 Hz

B = Reducer ratio 1 : 12 = 116 strokes at 50 Hz / 140 strokes at 60 Hz (not suitable)

(*2) The indicated capacity value is subject to changes due to the working pressure, the dosed liquid, the viscosity and the installation asset.

(*3) For capacity value at 60 Hz the max pressure indicate MUST BE DECREASE OF 20%

(*4) The pumps can be supplied with accessories if requested

Positive displacement sandwich Hydraulic diaphragm dosing pump

Type AP SD I 350

(*1) Piston's strokes number during 1 minute with 4 poles installed motor

F = Reducer ratio 1 : 27 = 51 strokes at 50 Hz / 61 strokes at 60 Hz

C = Reducer ratio 1 : 15,5 = 90 strokes at 50 Hz / 108 strokes at 60 Hz

B = Reducer ratio 1 : 13,5 = 103 strokes at 50 Hz / 124 strokes at 60 Hz

A = Reducer ratio 1 : 11,5 = 121 strokes at 50 Hz / 144 strokes at 60 Hz (not suitable)

(*2) The indicated capacity value is subject to changes due to the working pressure, the dosed liquid, the viscosity and the installation asset.

(*3) For capacity value at 60 Hz the max pressure indicate MUST BE DECREASE OF 20%

(*4) The pumps can be supplied with accessories if requested

PDP Series

Correct installation and

THE BENEFITS OF FLUID CONTROL ASSURE

- Increase efficiency and pump life.
- Decrease maintenance and operating costs.

The control of fluid dynamics is essential to ensure efficient and safe use of process systems. Uncontrolled fluid in motion can physically destroy a pumping system including the pumping, valves, meters, back pressure valves, in-line instrumentation and equipment.

1 FILTERS

We suggest to install filters (on the suction pipe) to keep back impurities that can be presented on liquid to dose or coming from pipeline system. The use of filters assures a trouble-free dosing.

2 SAFETY VALVES

Safety valves are designed to protect the pump and chemical feed system from over pressure damage 'caused by defective equipment or a blockage in the chemical feed line.

2 SAFETY VALVES

4 PULSATION DAMPENERS

Positive displacement sandwich Hydraulic diaphragm dosing pump

accessories

3 BACK PRESSURE VALVES

Back pressure valves apply positive discharge pressure to a metering pump system to prevent siphoning and eliminate varying down-stream pressure.

4 PULSATION DAMPENER

Metering pumps have a pulsating flow. Both positive displacement pumps and quick closing valves start and stop fluids that are in motion. Positive displacement pumps derive their pumping action by capturing a given amount of fluid in a chamber and pushing it out the pump's

discharge. Each pump cycle includes a suction stroke during which fluid flow is stopped. This pumping action produces an acceleration/deceleration of the fluid, creating units of uncontrolled energy, resulting in PULSATION, observed as pressure spikes.

Pulsation dampener is required for two reasons:

- To reduce high, non - permissible pressure fluctuations.
- To create a nearly continuous flow.

Our range of production also includes:

SR Series Spring Return:

- Piston dosing pumps: type "A" and "AP-A"
- Mechanical diaphragm dosing pumps: type "D" and "FM"
- Hydraulic diaphragm dosing pumps: type "B" and "BR"
- Sandwich hydraulic diaphragm dosing pumps: type "SD"

PDP Series Positive Displacement:

- Piston dosing pumps: type "AI" and "AP-AI"
- Hydraulic diaphragm dosing pumps: type "BI"

SDP Series:

- Solenoid dosing pumps: type "S"
- Solenoid dosing pumps: type "GA"

H Series:

Automatic plants for dissolution and preparation of powder polyelectrolytes: type "HA" - "HB"- "HE" and "HA-P"

EM Series:

Electric Mixers for chemical mixing: type "DAM", "DMT", "DEM", "DRV", "DRC" and "DVL"
